

Leandro Marsó

Córdoba, Argentina · +549 351 5193486 · [LinkedIn](#) · [Github](#) · [marso.ar](#) · elleandro@gmail.com

Platform / Site Reliability Engineer working where cloud, DevOps and AI overlap, with 7 years running production platforms on AWS and GCP. I build observability end to end (Prometheus, Grafana, Loki, ELK, OpenTelemetry) and now apply it to AI: AI agents wired to MCP servers (Grafana, Homer) for incident investigation, LLM access through LiteLLM, and OpenTelemetry tracking of agent token usage and cost. Security background at an AI-native company: IAM, SSO and zero-trust access, SIEM, SOC 2 support and alerting on PII and PCI data leaking into logs. IaC with Terraform; GitOps with Argo CD in my personal projects (marso.ar).

Professional Experience

SIPEngines LLC

Infrastructure / SRE Engineer, Cloud and VoIP Observability

Miami, FL (Remote)

July 2026 – Present

- Created four SLIs for SIP infrastructure by correlating raw response codes with call-history data, Prometheus metrics and Loki logs. They cut a long-standing error rate by an order of magnitude and MTTR by 20x, and shifted support to a proactive posture, fixing issues before customers notice.
- Run AI agents (Claude Code) connected to Grafana and Homer 11 MCP servers to reduce toil, speed up incident investigations and retrieve structured data, and track the agents' token usage and cost with OpenTelemetry.
- Built Prometheus exporters and Grafana-as-code (Terraform) dashboards to detect registration hiccups, real-time SIP call quality (MOS), post-dial delay and per-carrier trunk health across a multi-carrier VoIP platform, sourced from CDR data.
- Diagnosed and recovered a live production Prometheus data-loss incident, performed root cause analysis, and documented a safe historical-backfill runbook now used as standing practice.
- Ran multi-account AWS security audits (EC2, VPC, IAM, security groups) and CloudFormation drift detection, reporting and remediating misconfigurations such as overly permissive security groups and cross-account IAM trust risk.
- Deployed hardened AWS EC2 infrastructure as code (CloudFormation) following zero-trust principles: SSM Session Manager as the only access path and no SSH keys exposed.
- Migrating EC2 workloads to AWS Graviton (ARM64) AMIs and instances to reduce compute costs.
- Building a multi-tenant public status and uptime monitoring service (Uptime Kuma) end to end.
- Technologies: AWS (EC2, VPC, IAM, SSM, CloudFormation), Terraform/OpenTofu, Prometheus, Loki, Grafana, OpenTelemetry, Claude Code, MCP, GitHub Actions, Python, Kamailio, FreeSWITCH.

Personal Projects

AI-Augmented Platform Engineering Lab

[marso.ar](#)

Ongoing

- Building an end-to-end personal platform on Kubernetes covering infrastructure as code, CI/CD, observability and GitOps, with deployments managed through a self-hosted Argo CD instance; documented and showcased at marso.ar.

Freelance

DevOps Engineer, VoIP Platform

San Diego CA (Remote)

Feb 2024 – July 2026

- Deployed a geo-redundant Kazoo cluster (a distributed, carrier-grade VoIP platform built on FreeSWITCH and Kamailio) delivering mission-critical, multi-tenant PBX SaaS in production.
- Deployed the monitoring and alerting platform for the cluster.
- Technologies: Kubernetes, Helm, Docker, Ansible, Prometheus, Loki, Grafana, CouchDB, RabbitMQ, Kamailio, FreeSWITCH, Homer.

ASAPP

Cloud Security Engineer

Remote

June 2021 – Aug 2023

- Secured a large-scale, multi-cloud platform (AWS and GCP) at an AI-native company, covering thousands of Kubernetes pods on EKS and hundreds of EC2 nodes.
- Owned critical security infrastructure end to end, including the ELK Stack used as SIEM and Teleport for zero-trust privileged access to infrastructure.

- Monitored and remediated AWS IAM policies across 20+ AWS accounts, protecting access for hundreds of engineers to critical cloud resources.
- Responded to alerts that detected PII and PCI data reaching the logs when the redaction service failed or was missing from a new environment, containing sensitive-data exposure quickly.
- Supported the compliance team through SOC 2 audits, building dashboards and preparing evidence for the auditors.
- Integrated Trivy vulnerability scanning into the CI/CD pipeline.
- Optimized AWS S3 costs by tuning bucket lifecycle policies (storage-class transitions and retention), balancing compliance-driven retention requirements against data-access speed.
- Worked alongside infrastructure and engineering teams to implement security improvements and changes in production environments.
- Took part in the on-call rotation, responding to production and security alerts on the platform.
- Technologies: AWS (Lambda, SNS, SQS, RDS, ECR, CloudTrail, CloudWatch, EKS), GCP, Kubernetes, Helm, Docker, Ansible, ELK (SIEM), Teleport, Prometheus, Grafana, GitLab CI/CD, GitHub Actions, Trivy.

SiriusXM

Platform Engineer

Remote

June 2019 – May 2021

- Supported, automated and optimized deployments on-premises and on AWS for an in-house enterprise identity (IAM/SSO) stack with 40+ microservices built on PingFederate and OpenDJ.
- Provisioned and managed AWS infrastructure (EC2, S3, RDS, ECS, Fargate) with Terraform and Ansible, improving deployment efficiency.
- Took part in the migration of the IAM stack from on-premises to AWS.
- Built the Docker container for the Kafka service in a Kafka-based SIEM pipeline under development.
- Built and maintained configuration management and CI/CD pipelines (Jenkins, Bitbucket, Artifactory).
- Technologies: Python, Bash, Terraform, Ansible, Jenkins, Bitbucket, AWS (ECS, ECR, RDS, EC2, Fargate), Docker, Kafka, Linux, Vault, Nginx, Redis, PingFederate, OpenDJ.

Independent Contractor

VoIP Platform Developer

Remote

Jan 2019 – June 2019

- Designed and deployed a custom VoIP service (FreePBX, GSM gateways) for clients in four countries, from concept to production in 3 weeks, with call monitoring, audio fingerprinting and a Telegram monitoring bot.

Universidad Provincial de Oficios Eva Perón

Project Leader - Full Stack Developer

Villa Mercedes (San Luis)

Jul 2018 – Dec 2018

- Led the architecture and deployment of the university's student enrollment and academic records system; mentored a team of developers and managed external contractors.

National University of San Luis, FICA

Senior Teaching Assistant, Mathematics

Villa Mercedes (San Luis)

Dec 2016 – Jun 2018

- Taught mathematics at the Engineering Faculty; moved course materials to LaTeX under version control so all teachers could edit them.

Instituto de Formación Docente Continua Villa Mercedes

GNU/Linux Systems Administrator

Villa Mercedes (San Luis)

Oct 2015 – Dec 2016

- Deployed and maintained the GNU/Linux servers behind the institution's management system, including security, diagnostics and automated backups.
- Cloned production into a test environment to validate the migration from SIU-Guaraní 1.7 to 2.0.

Clariphy (Inphi-Marvell)

Senior Hardware and Software Developer, Embedded Systems

Córdoba (Córdoba)

Aug 2013 – Oct 2014

- Designed data acquisition and control boards for 100/200 Gb/s optical communication ICs, including a custom TCP control protocol on a bare-metal FPGA softcore (lwIP stack) and on an ARM microcontroller running an RTOS (C, Python, Verilog).

Clariphy (Inphi-Marvell)*Senior IC Physical Design Engineer / Analog Layout Engineer***Córdoba (Córdoba)***Oct 2008 – Apr 2013*

- Built high-speed blocks of up to 2M standard cells on 28nm and 40nm CMOS (RTL to GDSII, static timing and power analysis) and 10 GHz analog layouts, automating flows with TCL, Perl, Bash and SKILL on Linux compute grids.

Vanessa Duran S.A.*Network and GNU/Linux Administrator***Córdoba (Córdoba)***Apr 2005 – Sep 2008*

- Deployed and maintained GNU/Linux internet gateways and firewalls (iptables, Shorewall), and an OpenVPN site-to-site network linking 2 offices.
- Virtualized critical legacy servers (Xen, VirtualBox) and implemented Business Continuity and Disaster Recovery processes; deployed LDAP, Samba/NFS, LAMP and LTSP thin clients.

Skills

- AI Platform: AI agents (Claude Code), MCP servers (Grafana, Homer), LLM gateway (LiteLLM), OpenTelemetry for token usage and cost
- Kubernetes / GitOps: Kubernetes (EKS), Helm, Argo CD, Docker, Docker Compose
- Observability: Prometheus (custom exporters), Grafana (as code), Loki, ELK, OpenTelemetry, CloudWatch, SLI design
- Identity / Security: SSO (PingFederate, OpenDJ), zero-trust access (Teleport, SSM), IAM, SIEM (ELK), SOC 2 support, PII/PCI data handling, Trivy, Vault
- IaC / CI/CD: Terraform / OpenTofu, CloudFormation, Ansible, GitHub Actions, GitLab CI/CD, Jenkins, Bitbucket
- Cloud: AWS (5 years: EC2, EKS, VPC, IAM, RDS, S3, Lambda, CloudWatch, SSM), GCP (2 years); cost optimization
- Linux / Networking: GNU/Linux since 2005, TCP/IP, HTTP/HTTPS, firewalls (iptables), VPC, VPN (OpenVPN, Nebula)
- Data / Messaging: Elasticsearch, Kafka, RabbitMQ, PostgreSQL, MySQL, RDS, Redis, CouchDB; Telecom: SIP, Kamailio, FreeSWITCH
- Programming / Scripting: Python, Bash, Perl, C, TCL, Haskell
- Languages: Spanish (Native), English (Fluent), Portuguese (Fluent), Thai (Conversational)

Education

Electronic Engineer (Universidad Nacional de Córdoba)

1998 – 2015

Courses

- Advanced Programming of Embedded Systems (2017): PhD Mario M. Berón. Facultad de Ciencias Físico Matemáticas y Naturales - Universidad Nacional de San Luis. 60 hours approved course.
- Programmable Logic (2017): MSc Cristian Cisterna. Facultad de Ciencias Físico Matemáticas y Naturales - Universidad Nacional de San Luis. [60 hours approved course](#).
- Distributed Systems (2017): MSc Roberto Kiessling. Facultad de Ciencias Físico Matemáticas y Naturales - Universidad Nacional de San Luis. 60 hours approved course.
- Architecture and Programming of Embedded Systems (2017): PhD Mario M. Berón. Facultad de Ciencias Físico Matemáticas y Naturales - Universidad Nacional de San Luis. 60 hours approved course.
- Data Mining (2016): PhD Marcelo Luis Errecalde. Facultad de Ciencias Físico Matemáticas y Naturales - Universidad Nacional de San Luis. [60 hours approved course \(Resolution RR-3-383/17\)](#).
- Quantitative Data Analysis (2016): MSc Jorge Leporatti and MSc Fabricio Penna. Facultad de Ingeniería y Ciencias Agropecuarias - Universidad Nacional de San Luis. [40 hours approved course \(RR-1-1157/16\)](#)
